

# TOTGUARD™ TAG FAMILY

## TOTGUARD™ SUPPORTS MULTIPLE TAG TYPES

Adoption of our TotGuard™ solution opens up the option to employ a comprehensive variety of tag choices which you can mix and match to suit your needs.

### TOTGUARD TAMPER TAGS

With a battery life of 12 months, these tags have a patented Dual-tamper Detection technology which eliminates false alarms. They are mounted to the calf or upper-arm of the infant, using a specially designed soft and stretchable baby friendly wrap, making their application simple and swift.

**GuardRFID's tags are the world's smallest and lightest, making their placement convenient and comfortable for your patient.**

### UMBILICAL TAGS

These are the smallest and lightest Umbilical Tags available on the market, weighing in at a mere 5gms for the Single-use and 3 month versions, and 7gms for the 12 month version. Use the Single-use tags to assist you with your infection control measures. Like the other tags in the TotGuard family, the Umbilical Tag is waterproof so you can bathe an infant without the need to remove the tag.

### INFANT/NICU CUT-BAND TAGS

Utilizing a unique and patented cut-band technology developed by GuardRFID, Infant/NICU Tags offer cut-band tamper detection without any exposed metal contacts that could tarnish or be damaged, making them highly reliable. The circumference of the band allows placement of the tag on small or larger infants.

### PEDIATRIC/PATIENT TAMPER TAGS

Utilizing the same patented cut-band technology as the Infant/NICU tag, Pediatric Patient Tags are designed to fit the wrist of pediatric and older patients. They also don't have any crevices or openings, and are waterproof, and so easier to clean and disinfect.

### ARTICLE TAGS

Can't find a Breast Pump that you urgently need, or are your wheelchairs disappearing? With a battery life of 4 years, and 1.1" in diameter, GuardRFID's Article Tags are your answer for tracking, locating and protecting your precious assets so that they are available when you most need them.

**Designed with versatility in mind, TotGuard™ has the option to support multiple tag-types within the same system.**

### ACTIVE LABEL

The lowest profile Active RFID tag available at only 0.23" (6mm) in thickness, it can be placed on small and large objects alike while being very discrete. The tag has temperature and motion sensors built in. A choice of four colors allows you to pick one that will suit your environment, or to differentiate equipment.

### STAFF TAGS

Suitable for multiple applications, these tags have two buttons that can be used for a variety of functions, such as to send a duress alarm, sensors for motion and fall detection, as well as audible and visual indicators. The tags have the ability to receive signals just like a pager, so that you can send an acknowledgement to a duress alarm, for example.

### PATIENT TAGS

Only 1.1" in diameter, these Tags are available in Single-use or 12 month versions, with a thickness of only 0.42" and 0.57" respectively. Use them for Pediatric, Wandering Patient, or for Patient Flow solutions. Normal hospital bands, including tear-proof bands, may be used to mount them on a patient's wrist.

### MOTHER TAGS

Avoid mix-ups between mothers and their babies by using GuardRFID's Mother Tag. The system will warn you if you happen to be handing over a newborn to the wrong mother.
